Telescope opical device constituted by a concave miror 1, a concave
actuating membrane 2, and magnetic dipoles 3 and 4 tied to the telescope;
the actuating membrane 2 microshapes the membranous mirror 1, and the
5 magnetic dipoles 3 and 4 macroshape the actuating membrane 2.
Folding of the mirror 1 and of the actuating membrane 2 by regular
distortions of the original concve shape.
